

Memory Match Flutter Game - README

CS5450 Mobile Programming - Exercise 2

This project is a responsive memory matching game created using Flutter and Dart. The user flips cards, finds matching pairs, tracks moves and time, and can restart the game.

Project Structure

```
MemoryMatchFlutter/  
pubspec.yaml  
README.md  
README.pdf  
lib/  
main.dart  
assets/  
images/  
card_1.png ... card_8.png
```

Main Features

Feature	Description
Flutter/Dart	Complete game logic and UI are written in Dart.
Memory matching	16-card grid with 8 matching pairs.
Responsive design	The grid adapts to phone, emulator, and web screen sizes.
Game stats	Moves, matched pairs, and timer are shown.
Restart	The player can reset the game anytime.
Win dialog	A completion message appears after all pairs are matched.

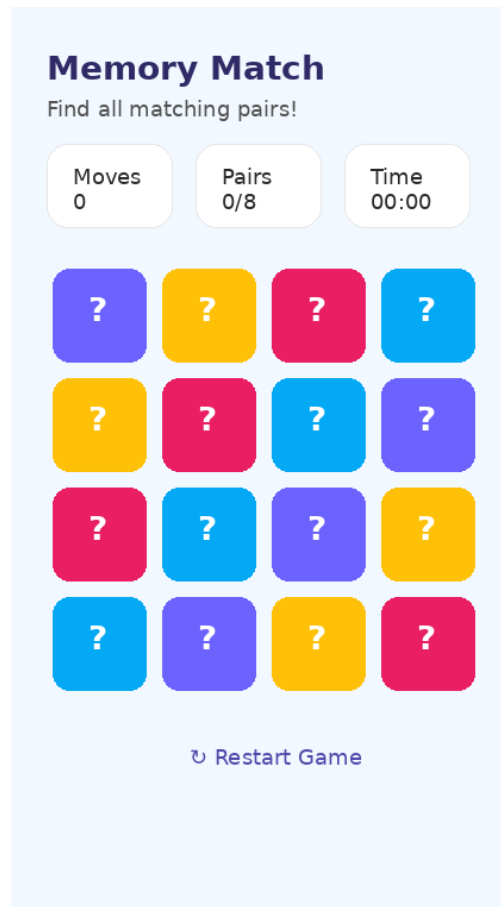

How to Configure and Run

1. Install Flutter SDK from the official Flutter website.
2. Open Android Studio and install Flutter and Dart plugins.
3. Open the MemoryMatchFlutter folder in Android Studio.
4. Run `flutter pub get` in the terminal.
5. Start an Android emulator or connect a physical phone.
6. Run `flutter run`.
7. To run on Chrome, use `flutter run -d chrome`.

Important Commands

```
flutter doctor  
flutter pub get  
flutter run  
flutter run -d chrome  
flutter build apk --release
```
